

Reasoning for Code Changes

Reasons for Code Changes

The following changes were made to the code: * **Updated import statements:** The `javax` imports were replaced with `jakarta` imports to ensure compatibility with Spring Boot 3. This change is necessary because Spring Boot 3 has migrated from `javax` to `jakarta` packages. * **Fixed duplicated field:** In the `RegisterRequestDto` class, a duplicated field `fullName` was removed to prevent compilation errors and improve code quality. However, it seems there was an error in the provided diff, as the duplicated field was not actually removed in the example given. The correct change should have been to remove the duplicated `fullName` field.
